1 Plan

2 Subjects

- First steps

The scene, the gruesome truth

The corpse was found in a dead end alley, covered in blood...

Introducing the victim

You will be working with the docuvent project that was subject in the last semesters SoFa with the same name.

- The project should deliver a 'Rollerverleih' program, the German way of describing a rental system of air polluting noisy vehicles. Yes we have prejudices...
- The interesting thing of this application is that it has a real industrial customer. (Who will not be involved in you quest).
- You start your forensic research on the artefacts that the previous group left behind in the repository.
- The repository is available to you as read only at <https://www.fontysvenlo.org/sofasvn/docuvent/> This repository is alive and (historically) complete, so you may use it as a time machine.

Plan

- W1: First analysis, focus project plan** You make your first analysis of a given software project with the focus on the available project plan from the repository.
- W2+W3: Analysis and fact finding of described artefacts** You will re-execute the test plan as found in the repository. You will also compare the test plan to the requirements document and possibly complete the test plan to match the requirements.

Plan contd

- W4+5: Quality management and Change requests** You should prepare a short report on the gravest deficits, which can be derived from the logs in previous tasks. Write completely documented change requests for two to three of the afore mentioned deficits, in which you add or revise the specification and prioritise the change requests.
- W6+W7: Design and implement the change requests** You may have to change the design and refactor the software. Make a new baseline. Make a concise description of the new state of the product, stating improvements or added features and (hopefully none) deficits.

Rules

-
- The teachers Richard van den Ham, Pieter van den Hombergh, Ferd van Odenhoven and Julia Stoll will coach two groups each.
- Mrs Stoll will help you with presentation preparation. There is a separate schedule for that.
- Each Friday morning the coach will meet with the group (a normal project meeting) starting with group the even numbered group in the even week and the odd numbered group in the odd week. The oddness of weeks is measured on the year calendar. We now live in week 7.
